BALMY X SASKIA

Saskia Thuot, popular host, businesswoman, columnist, and blogger, is recognized for her great authenticity. An excellent communicator, she is a real jack-of-all-trades. She has accompanied the Quebec public for nearly 25 years and likes to sow good around her. It is not surprising to see her working in projects from the heart and bringing happiness. Always guided by her instinct, the businesswoman fell in love with the Quebec company Balmy, whose mission is to ensure that women around the world embrace a daily dose of adventure and sweetness.

Balmy is a magnificent collection of multi-purpose towels are hand-loomed in Turkey with superior quality fabrics made from 100% OEKO-TEX certified ecofriendly fibers. The details of the weaving and the craftsmanship behind these towels make a big difference in their quality, their durability and their incredibly soft touch. What truly differentiates them though is the fact that even though they are compact and lightweight, they remain super absorbent and quick drying (they dry completely in minutes!). They are also very large, sand free and offer a unique look! At the beach, at the pool, after bathing, in yoga class or as a comforter, you won't be able to go without it. So, how do you like your Balmy?

OUR FABRICS

FABRICS

Each Balmy towel is handloomed in Turkey with premium fabrics and will get softer and more absorbent with each wash. This means you can use it as much as you like, it will only get better with time!

Our towels are eco-friendly and made from **100% OEKO-TEX certified natural fibers**. This certification confirms the human and ecological safety of our products throughout the entire textile value chain.

PREMIUM COTTON

Our premium Turkish cotton is woven with longer fibers which gives it the perfect balance between absorbency and softness and makes it the best cotton to be used in towels. This unique material also becomes softer, fluffier and more absorbent with successive washings. As if it wasn't perfect enough already, sand doesn't hold on to it and it dries extremely fast.

BAMBOO

Our Bamboo fabric is the softest you'll ever touch, so soft in fact that you'll want to sleep in it. It also has antimicrobial properties referred to as "Bamboo Kun". These natural antimicrobial bio-agents help reduce bacteria that thrive on materials as well as on the human skin. Bamboo can also take up to three times its weight in water, which makes it incredibly absorbent, yet it remains fast drying.
